

Robinsons
ALUMINIUM GREENHOUSES
75 Years of Aluminium Greenhouses

www.robinsonsgreenhouses.co.uk

Made in the United Kingdom

Introduction to Robinsons

For over 75 years, amateur and professional growers alike have recognised Robinsons as being at the very forefront of the greenhouse world. Renowned for their strength, precision engineering and practical features, Robinsons greenhouses are still the benchmark against which other greenhouses are measured. If you want the best in your garden, then keep reading!

History

Started in 1947, the company has moved around over the years including spells at Winchester, Southampton and Southam. Now based in Staffordshire, a nice central location for nationwide distribution.

Still made in Britain today

All Robinsons greenhouses are made in our factory in Staffordshire. The aluminium raw material is also extruded in the UK.

Robinsons
ALUMINIUM GREENHOUSES

Rosette model shown in Light Bronze

This combination of box section bars and screwed-in capping system is what makes a Robinsons stand head and shoulders above other greenhouses

Strong Frame

Robinsons greenhouses are extremely strong, probably the strongest greenhouse available in the UK today. Its not just because we use far more aluminium in the frames (some sections are as much as twice as thick) its also because of the clever design.

NEW Box Section

Robinsons models use mostly box section glazing bars. This unique design is what sets Robinsons apart from other brands - which tend to use T-shaped sections. The box section design gives a far sturdier frame which is particularly resistant to twist - vital for strength in windy conditions.

Add to this the unique and extremely strong glazing method and extra sturdy A-frames placed at every joint with an extension module and the finished product is just about as sturdy and wind resistant as it gets.

YouTube

Glazing

The Robinsons unique low-profile glazing method has been tried and tested now for well over 20 years. The fact that the capping is screwed in means that it is extremely strong and it is almost impossible for the glass to blow out.

Duraglaz 4mm Toughened Safety Glass

All Robinsons come with 4mm toughened safety glass as standard. This is 33% thicker than most greenhouses which use only 3mm (sometimes not even toughened) Toughened glass is 5-7 times stronger than standard glass and if it does break it disintegrates into small pieces - reducing the chance of injury. As a rough guide, it might survive a football but it probably wouldn't survive a cricket ball!

Go online to see a video of a van drive over the Robinsons 4mm toughened glass.

*Note: New colours (Pastel Sage, Ivory, Anthracite and Old Cottage Green) will have an aluminium cover cap in matching colour. PVC on plain aluminium only.

YouTube

Search YouTube for 'Robinsons mini greenhouse'

This amazing demonstration of strength took place in September 2015. Although a special frame to level the roof was made, the greenhouse underneath was completely standard and unmodified! The mini weighs nearly 1.5 Tonnes.

Perfect ventilation as standard

Ventilation really is vital in your greenhouse and that's why all Robinsons greenhouses come complete with a generous allocation of roof vents, all fitted with Bayliss XL automatic openers. These clever devices work on heat expansion alone and simply open the roof vents as the greenhouse warms up in the sun. You can also fit optional auto-louvre openers to your louvre side vents if you wish to be fully automatic.

Louvre side vents included

Louvre side vents are now included on virtually every Robinsons greenhouse. Whilst the automatic roof vents will draw hot air out of the top of the greenhouse, the louvres will draw the cool fresh air in to replace it. It is this combination which makes the Robinsons ventilation system so effective.

Robinsons practical design features

High Eaves

At 5'6" high at the eaves, Robinsons are as much as 18" higher than some models. The extra height is vital for your own head room, but also for tall plants such as tomatoes and chrysanthemums. The height also gives you plenty of room for a high level shelf, and makes the air inside the greenhouse more stable and less susceptible to sudden temperature changes.

Easy-Glide locking doors with no step

The Easi-Glide Robinsons doors are very strong (the glass is securely held in with full length strips) and they slide beautifully. The Go-Lo low-level threshold means that you have no big step to trip over when entering the greenhouse and it allows easy access for wheelbarrows and wheelchairs. All the models that are big enough have double doors for nice wide access.

Universal fittings channel

The standard channel in the glazing bars means that you can easily buy extra useful fixings such as shading or insulation clips, L-shaped brackets, extra shelves etc.

Extend or move your greenhouse later

If you need to move your greenhouse or even extend it (in 6ft or 8ft modules) later then that can be done – giving you future flexibility. It is also worth noting that you can extend your greenhouse to any length – without partitions, due to the excellent strength of the specially designed A-frames which go on the extension joints.

Internal partitions - create two climates

Ideal for sectioning off a smaller propagation area or area for heating in the winter. These are available on the 8ft, 10ft, 12ft and 14ft models and come complete with sliding door or doors. A partition also adds considerable strength to your greenhouse.

Practical staging & shelving

Robinsons aluminium slatted staging and shelving is unusual in that it is fitted to the greenhouse rather than free standing. The advantage of this is flexible height positioning, no vertical legs so you can put bulky or heavy items such as compost or planters underneath on the floor. This also makes it wheelchair friendly.

The high level shelf is also unusual in that you can get a shelf along the whole length of the greenhouse – not always possible on all aluminium greenhouses.

Robinsons
ALUMINIUM GREENHOUSES

Robinsons
ALUMINIUM GREENHOUSES

Here's why it's worth investing in the best quality

At 5'6" high, at the eaves, a Robinsons greenhouse is one of the highest that you can get. Extra height gives you more headroom for plants such as tomatoes, chrysanthemums and vines, more space for a high level shelf, a more stable environment inside and more head room for you when working! Although other greenhouses can be high as well – the strength of the frame becomes vital as you go higher as the greenhouses become more vulnerable to wind damage.

All Robinsons models come with generous ventilation including these roof vents fitted with Bayliss XL automatic openers. These ingenious devices simply expand in the rising heat and open the roof vent, releasing the warm air when needed.

Optional Victorian ridge cresting is made from cast aluminium in matching colour and adds a decorative touch to your greenhouse. Some gardeners tell us that it also deters pigeons from perching on the greenhouse roof.

Pro-Cap PVC glazing capping is screwed in tightly to the aluminium frame using stainless steel screws. This grips the glass firmly onto an air filled rubber. The end result is an extremely strong glazing method with a final cover capping hiding the screw heads. This gives the whole structure of the greenhouse far more strength and a neat finish.

These Easi-Glide doors each have four Nyloglide door wheels for a smooth 'fingertip' opening

Integral aluminium guttering (for strength) and PVC downpipes included with every greenhouse – plus range of optional extra fittings available.

Duraglaz 4mm toughened glass throughout (33% thicker than many greenhouses) Plus these 1ft high kick panels are designed so that the most vulnerable area to breakage is a small one (and therefore cheaper to replace).

Attention to detail means that the Robinsons greenhouse is far better 'finished off' than many greenhouses.

These high quality louvres draw cooler air in to replace the warm air that is released by your automatic roof vents.

Optional integral 3 slat shelf is very strong, adjustable to different heights and fills the whole length of the greenhouse.

Optional integral staging is extremely strong, and because it bolts to the side of the greenhouse, you can set it to the perfect working height, plus with no vertical legs in the way, you can make the most of your ground space.

Nice wide double doors (not every model) provide easy access and no step at door for easy wheelchair or wheelbarrow access.

Go-Lo is a properly engineered low level threshold for easy access. (Beware of additions to some greenhouses which are loose or no threshold at all which can be weak).

Locking door; catch helps prevent doors blowing open in strong winds.

Contemporary Colours

Stunning range of colours

Contemporary Colours (aluminium colour capping)

These five Robinsons colours are finished with an Aluminium capping system that is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour.

FREE colour sample plates - ask your agent for a sample.

Classic Colour (PVC white capping)

This mill colour is finished with a white PVC capping.

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Robinsons
ALUMINIUM GREENHOUSES

Royale Reach

8x12 Royale Reach in Anthracite with doors on the side

8x18 Royale Reach in Old Cottage Green with doors on the side

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Royale model.

This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required).

Multi-span versions available, see P28.

You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Robinsons ALUMINIUM GREENHOUSES Royale Reach (Extra High Eaves) 8'8" Wide (2636mm)

- ✓ High Eaves ✓ Toughened glass ✓ Bar capping ✓ Guttering & Downpipes

Internal blinds per 2' section **£129**

Internal roller blinds for roof or side

Hanging basket brackets pack of 10

Recommended staging

On this Rosette model, you can fit the 35" wide 10 slat staging which just fills the 3ft or so to the side of the doorway. With the high level shelf above you then have a super set-up. Do bear in mind that not everyone can reach to the back of a 3' wide staging, so 25" 7 slat can be fitted instead..

Contemporary Colours (aluminium colour capping)

These five Robinsons colours are finished with an Aluminium capping system that is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour.

FREE colour sample plates - ask your agent for a sample.

Classic Colour (PVC white capping)

This mill colour is finished with a white PVC capping.

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Rosette Reach

10x16 in Mill finish extra high eaves - on reach models, you can position a door on the side if you wish

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Rosette model. This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required).

Multi-span versions available, see P30.

You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Rosette Reach (Extra High Eaves) 10'9" Wide (3260mm)

- ✓ High Eaves
- ✓ Toughened glass
- ✓ Bar capping
- ✓ Guttering & Downpipes
- ✓ Auto-vents
- ✓ Ground level door threshold
- ✓ Louvre side vents

Specification

- Extra high eaves (6'6") for more space
- Extremely strong R-PRO box section glazing bars
- DURAGLAZ 4mm toughened safety glass
- PRO-CAP Screw-in capping system as standard
- Option to create double span models for extra wide greenhouses
- Locking double door with GO-LO low level threshold
- Doors can be positioned on end or side
- Integral gutter with downpipes
- Superb ventilation included (see table)

Redoubtable

10x36 Redoubtable in Anthracite with doors on the high side and R-type modification (where the back end goes against a wall)

8x12 Redoubtable in Anthracite with doors in the gable end

8x12 Redoubtable in Old Cottage Green with doors in the high side

Door Positions

Image shows doors on the high side of the greenhouse. You can position your double doors on the end or on the high side.

When the building is longer than 12ft it will consist of a main building plus an 8ft extension. There will be an A-frame at the joint for strength and the 4ft of the door opening can not clash with this A-frame. Please ask for advice about door positioning on longer models.

Robinsons Redoubtable 10'7" Wide (3208mm)

- ✓ High Eaves
- ✓ Toughened glass
- ✓ Bar capping
- ✓ Guttering & Downpipes
- ✓ Auto-vents

Internal blinds per 2' section **£129**

Recommended staging

On this Redoubtable model, you can fit the 35" wide 10 slat staging onto the wider side. With the high level shelf above you then have a super set-up. If you want to add staging along the narrow side then it's best to use the 25" wide & 7 slat as this will fit nicely to the side of an end door. If you position your doors on the side you could even create a whole U-shape of staging - using the 37" along the side and 25" up each end.

Nominal base length Actual base length (B)	6'7" 2012mm	8'8" 2632mm	10'8" 3252mm	12'8" 3872mm	14'9" 4492mm	16'9" 5112mm	18'9" 5732mm	20'10" 6352mm	22'10" 6972mm	24'11" 7592mm	Extension 8'1" 2480mm

Hanging basket brackets (10) **£29**

Additional double doors for plain end **£799**

Internal Partition with double door **£1999**

Internal blinds per 2' section **£129**

Recommended staging

When planning the layout in your Regal, you should try to use the full width to your advantage. This may mean that you go for 25" 7slat staging each side rather than the 35" wide 10 slat so that you can then add a bed or workbench in the middle with 2 paths. If you have a partition, then you may wish to consider having a U-shape of staging in the rear section for maximum efficiency.

ALUMINIUM GREENHOUSES

Royale Reach

Double & Triple Span

17x12 Royale Reach Double Span in Anthracite

The valley gutter is wide and strong enough to walk down for maintenance

Create larger models such as this triple span

Features

Position your doors on the side or end & fit extra shelving in. EXTRA high eaves of 6'6" give this greenhouse a fantastic atmosphere that gives you and your plants a whole foot of extra headroom over the standard height Royale model. This extra height means that you can position your doors on the end or the side of the greenhouse. (End doors are standard. Side doors must be specified if required). You will also have room to place two high level shelves above your staging - considerably increasing your growing capacity.

Robinsons ALUMINIUM GREENHOUSES Royale Reach Double & Triple Span 17'7" Wide (5368mm)

Contemporary Colours (aluminium colour capping)

These five Robinsons colours are finished with an Aluminium capping system that is less prone to fading in the sun than PVC capping - particularly on darker shades.

Old Cottage Green - Blend in with your garden with this pleasant green, like the windows from an old English cottage.

Pastel Sage - A pale stone colour with a greenish hint.

Ivory - This ivory colour is popular on Victorian models, the off-white shade adds a subtle antique effect.

Anthracite - Popular in the window industry, anthracite is a sophisticated and modern shade of dark grey.

Light Bronze - A metallic stone colour.

FREE colour sample plates - ask your agent for a sample.

Classic Colour (PVC white capping)

This mill colour is finished with a white PVC capping.

Mill Finish - This is unprocessed aluminium. It will weather to a dull grey over time. Finished with a white PVC capping.

Benefits of Robinsons Octagonal Greenhouses

Ultra strong box section corner bars. These chunky sections are extremely strong as well as giving the greenhouse 'clean lines' Screw in PVC Glazing capping. Glass is held in with full length PVC bar capping with stainless steel screws with an extra cover cap to hide the screws. The glass sits onto an air filled rubber beading and is then tightly gripped by the capping. This adds strength to the glazing - which is very securely held- and also to the greenhouse as a whole.

Good eaves and door height. Many Octagonal greenhouses on the market are quite low at the eaves and consequently, they tend to have low doors. These Renaissance models have full 6'2" high doors giving you easier access and more headroom for your crops and shelving. More included as standard. As a package these Robinsons Renaissance models are extremely good value for money. They include

a long list of items which are add-on costs on other greenhouse such as toughened glass, green finish, auto-vent for roof, staging all around and two high level side shelves. Plus guttering and downpipes.

Internal staging (tanalised timber tops)

6x8 model - you'll need your base to provide level support for the bottom track

Auto-vent

Cresting & finials optional

Recommended staging

Robinsons slatted staging is an integral staging that is actually bolted to the side of the greenhouse. This has the advantage that it has no vertical legs which can be in the way for working and storage. You can also adjust the height of the staging when building so that it is at your perfect working height. It is very strong and the full length shelf is also extremely useful (it is hard to find a proper full-length shelf to fit many greenhouses).

Glass to ground model shown - optional low wall model, no extra charge [add 83mm to heights]

5x10 Mill finish Lean-to with door in right hand end

Low Wall

We can adapt this model to sit on a standard height low wall, roughly 2ft high. Please specify 'Low wall model' and we will send you an accurate brick plan with your order confirmation. There is no extra charge for Low wall models. Note: The Low Wall version of this model is 83mm higher at eaves and ridge, note the protruding footing to support track.

You can also adjust the height of the staging when building so that it is at your perfect working height. It is very strong and the full length shelf is also extremely useful (it is hard to find a proper full-length shelf to fit many greenhouses).

Special adaptations

There are a number of relatively easy modifications that can be made to a Robinsons greenhouse which will help you if you are needing a slightly more bespoke greenhouse:

Fitting service

All of these modifications can easily be made in the factory, but there are no special instructions written, so its usually best to engage an experienced Robinsons greenhouse fitter to do these jobs. Please discuss this with your local expert.

R-Type modification

This is where we remove the rear gable end of your greenhouse so that it can join onto an existing wall or building.

This allows you to create a completely different type of lean-to greenhouse - more like an Edwardian style.

When ordering an R-Type, the price of the greenhouse itself can be reduced by deducting £50 per foot of width. The Regent model shown in the photo is a 6ft wide greenhouse meaning the price would be reduced by £300 for this modification.

6x8 Regent in Anthracite with an R-Type modification where the back fits against the house

V-Type modification

This modification is becoming increasingly popular as it allows for one side of your greenhouse to be removed and a valley gutter assembly is attached so that it can join onto an existing wall. Victorian style brackets are also supplied to support the valley gutter inside the greenhouse.

Some minor onsite fabrications are required and information is provided on how to do this. Please ensure that the wall is straight and strong enough to support part of the greenhouse.

A special dimensions drawing will be provided by us for this type of modification.

Z-Type modification

With this modification you are able to specify the height of the wall you want the full height greenhouse to sit on i.e. 5'6" eaves height - plus your wall. This gives you the opportunity to fit the greenhouse over an existing doorway for instance. The brick wall must be built to an official special base plan provided by us.

The most common heights customers choose are 150mm, 300mm, 450mm and 600mm as a course of bricks is usually 75mm. We then modify the door end of the greenhouse so that the door drops down to ground level and adjust the glass above the door.

The cost of the Z-Type modification is £300 per doorway.

10x30 Rosette in Mill with a Z-Type modification on a 150mm wall

Internal partitions can also be modified for the Z-Type

What sort of base should I prepare?

There are lots of choices for your base, the main principles being that the base should be firm, level and square.

The most popular option is level paving slabs as these are easy to lay, and water can drain away between the slabs. Remember that water must be able to get away, so sealed solid bases such as painted or tiled concrete can result in lying water unless drainage is built in.

Water will also be free to move in or out of the greenhouse in between the cill and the slabs - if you are growing in strict humidity controlled conditions, then you may wish to keep this to a minimum and in this instance, we recommend that you build a one brick high plinth for the greenhouse to sit on.

Your base will affect the long term strength and stability of your greenhouse, so it is worth investing at this stage. It is vital that your greenhouse is anchored down to the base. With most models we supply L-shaped brackets and screws & rawl plugs for this purpose.

Bases such as Tarmac or block paving are not ideal as anchorage can be difficult. Note that gravel is not best friends with greenhouses either - if you really want gravel nearby choose a large size stone so that it doesn't interfere with the door. Your local distributor may be able to help you with your base.

Please note that no greenhouse is an exact size in feet - they are always bigger than the nominal size - so what is called an 8x10 greenhouse would actually be nearer to 8'6" x 10'8".

Please only prepare a base when you are in possession of the official base sizes which are only given in mm, we send these out with your order confirmation.

For dwarf wall models we will supply a detailed plan of the wall measurements.

Can you assemble the greenhouse for me?

All Robinsons greenhouses are sold on a 'self-assembly' basis, and will be delivered in kit form, however we do recommend that you engage an experienced greenhouse fitter to assemble the greenhouse for you. Your local Agent will be able to arrange this for you.

Delivery Times

Your greenhouse will be hand made to order and delivery times vary throughout the year.

Delivery Costs

Mainland UK Free delivery, except postcodes AB, DD, IV, KW, PH and TR +£100. For off-shore, we can crate the glass and pack for onward shipment for £250. Any shortages can only be sent to mainland address. Accessories ordered alone will attract a carriage charge (usually £10, or £3 if postable).

Guarantee

Your Robinsons greenhouse comes with a free 10 year frame guarantee. This covers the frame and powder coating against faulty manufacture. Moving parts are guaranteed for 12 months. Exclusions include: glazing, wind damage, Labour, and accidental damage.

Where can I order my greenhouse

From your local Agent - to find your nearest, please enter your postcode into the website:

www.robinsonsgreenhouses.co.uk

Please note that no greenhouse is 100% waterproof, and we do not recommend that non-greenhouse items such as soft furnishings are used in a greenhouse. E&O E.
