

New Overlap Sheds From Power

We appreciate consumers may be hesitant on spending so much money for garden sheds whilst the cost of living continues to increase.

Power have therefore developed a range of overlap sheds to compete with the cheaper end of the shed market.

Available as an Apex or Pent roof, with a choice of 18 sizes.

The features of this new range are as follows:

- 10 Year Guarantee
- Door and window location flexibility
- Option of Double Doors and / or no windows
- Rustic Overlap Cladding - made from high grade 10mm thick overlap cladding. It has a particularly large 40mm overlap to minimise timber movement and create a stronger, longer lasting product.
- Tongue and Groove floor and roof - floor and roof is made from 12mm thick tongue and groove timber. No budget timber such as OSB or chipboard are used!
- Internal framing - The framing is 28x28mm and so when the panels are assembled and joined together it creates double strength 28x56mm thick framing.
- Toughened Safety Glass - complete with toughened safety glass maximising strength and security and already beaded internally into place so you don't have to fit the glass yourself.
- Galvanised ironmongery - we ensure your shed comes with higher quality hinges and turn buttons so the shed lasts longer and minimises oxidisation. There is even a galvanised door pull.
- High performance felt - The shed is complete with a high performing waterproof felt from an advanced formula with special 'polyester' backing ensuring it lasts longer and doesn't tear easily.
- Advance exterior wood preservative - with wax additive meaning you don't have to re-treat your shed for a WHOLE YEAR. However, it is water based and has just the right amount of wax which means if you want to paint over in a different colour, you can.
