CLEARVIEW
GARDEN BUILDINGS LTD

ABOUT US

Clearview is a small family run company that is proud to be one of the leading manufacturers of timber garden buildings in the UK. We design, manufacture and install garden buildings around our customers needs. We carefully select the highest quality materials available to ensure our customers receive the very best buildings at affordable prices.

We always try to put the customer first and know not all customers want set sizes so as well as offering a wide range of set size buildings in our standard range we also offer a bespoke made to order service were we work with you to accommodate your needs.

BASE WORK

After purchasing a garden building you will need to get a base prepared ready for us to install on to. We recommend getting a professional builder to install your base making sure it is square, level and free from obstruction. If you need any guidance regarding what type of base would best suit your chosen building, please do not hesitate to contact us and we will guide you through the requirements. Please remember when siting your base that we will require enough room for our installation team to work around your building and you will need enough room around the building to maintain it.

All of our unpainted buildings are treated in next-generation Tanalith E Preservative

We know that a large percentage of our customers love their garden buildings to be painted. This gave us the idea to design our own in-house spray booth specifically designed around the garden buildings we manufacture with its own separate drying room. This enables us to control the quality of the application, drying times and conditions to ensure you get an amazing finish product.

Please note that all our painted buildings are pre-treated with Protim. This is an active treatment specifically designed for under-coating systems. With the right after-care it has a minimum life expectancy of 15 years.

When you choose a painted building, we go through a lengthy procedure to ensure you get the best possible paint coating. Before we assemble any part of your chosen building, we prep, and end seal all end grains. Once the panels are assembled, we fill all external nail heads to seal from water penetration and seal across the bottom to protect from rising damp.

The paint we use is specifically formulated for the UK garden building industry and the only one that stood the length of time through our in-house trials.

After numerous surveys we put together a selection of 7 colours we knew our customers would love...
